Secure Data Handling SOP Framework

Secure Infrastructure Short Learning Course - Boston City Campus

Systems hardening and data compliance standards

Project Purpose

Created an SOP framework for secure customer data handling, dashboard access, spreadsheet sharing, retention and escalation.

Certificate to Project Mapping

How the training translates into a portfolio artifact recruiters can inspect.

Secure Infrastructure

Certificate Evidence

Secure Infrastructure Short Learning Course - Boston City Campus

Systems hardening and data compliance standards

Project Evidence

Secure Data Handling SOP Framework

GitHub repo: [secure-data-handling-sop-framework](#)

What This Proves

- The certificate was converted into a practical project with a business problem, solution, artifacts and measurable indicators.
- The project connects technical training to Zola's existing e-commerce, logistics and retail operations experience.
- The PDF can support resume claims while the matching GitHub repository can hold data, scripts, screenshots and documentation.

Business Problem and Solution

Secure Infrastructure

A recruiter should understand the real-world value in under one minute.

Business Problem

Operational teams often share customer and shipment data through spreadsheets, dashboards and email without consistent controls.

Portfolio Solution

Created an SOP framework for secure customer data handling, dashboard access, spreadsheet sharing, retention and escalation.

Stakeholder Chat Simulation

Manager: What is the fastest way to prove you can apply this certificate to real operations?

Zola: I built a demonstration project around secure data handling sop framework, including sample data, artifacts, graphs, implementation notes and resume-ready outcomes.

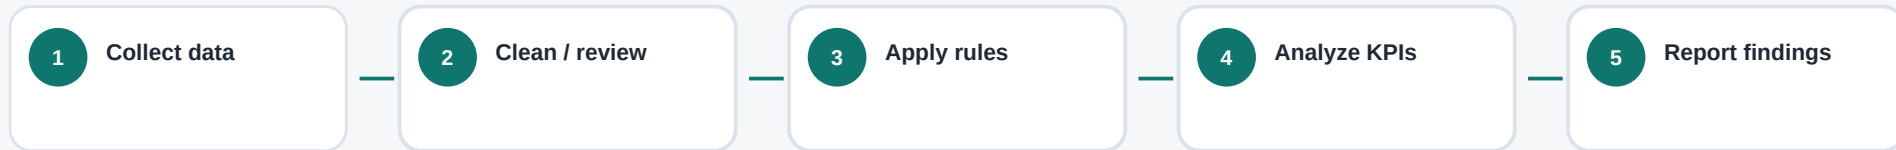

Manager: Can we inspect the evidence?

Zola: Yes. The GitHub repo `secure-data-handling-sop-framework` is structured to include datasets, documentation, screenshots and the project README.

Demonstration Workflow

A visual process showing how the project works.

Secure Infrastructure

Implementation Notes

- Use mock or anonymized data only. Never publish real DHL, Woolworths, customer or employer data.
- Keep the README honest: describe this as a certificate demonstration project inspired by real operational experience.
- Include screenshots, sample files, scripts or templates so the resume claim has visible proof behind it.
- Link the GitHub repo from your resume under the matching project title.

Sample Data Evidence

Portfolio-safe sample data that supports the project story.

Sample Dataset Preview

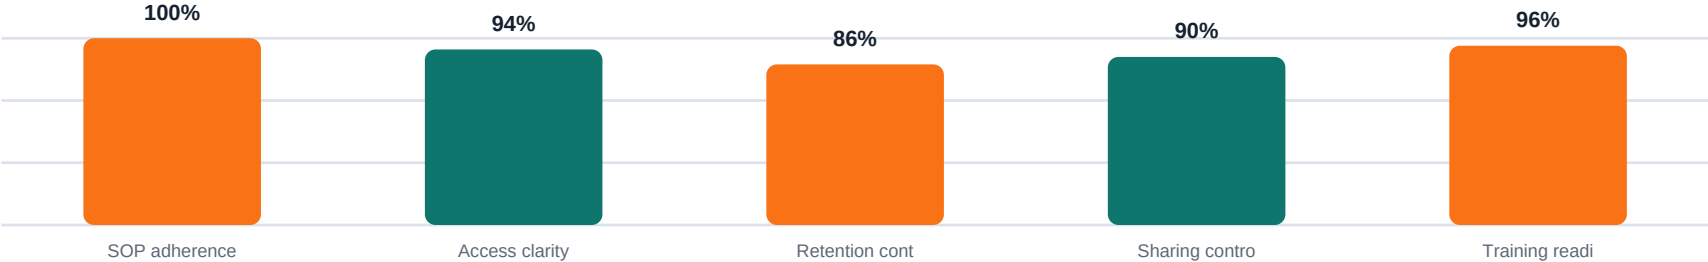

process	data type	risk	control	owner	review cycle
Shipment report	Customer data	High	Restricted access	Ops Lead	Monthly
Inventory file	SKU data	Medium	Version control	Analyst	Weekly
Dashboard	KPI data	Medium	Role permissions	Manager	Monthly
Escalations	PII	High	Retention rule	Support Lead	Monthly

Resume proof angle: this page shows the kind of structured data the project works with. In GitHub, include the full mock CSV under the `data/` folder and explain that sensitive employer/customer data was not used.

Graphs and KPI Demonstration

Charts make the project easier for recruiters and hiring managers to scan.

KPI Performance Snapshot

Insight Example

The strongest outcome shown here is sop adherence at 100%, supported by structured evidence and documented analysis.

Decision Example

The project turns raw operational data into a decision path: detect the issue, measure impact, document the control, and recommend the next operational action.

Proof Artifacts

What the matching GitHub repository should contain.

Secure Infrastructure

Artifacts Included

- Secure data SOP
- Data classification guide
- Dashboard access checklist
- Retention checklist
- Training handout

Secure Infrastructure

Secure Data Handling SOP Framework

- Developed a secure data handling SOP framework for e-commerce operations, supporting access control, retention and compliant file sharing.
- Created documentation for dashboard permissions, spreadsheet sharing, customer data handling and escalation workflows.
- Converted secure infrastructure training into a governance project suitable for resume and GitHub presentation.

GitHub README Opening

This repository contains a certificate-based demonstration project for secure data handling sop framework. It includes sample data, documentation, visuals, implementation notes and resume-ready evidence connected to practical e-commerce operations.

Final Evidence Checklist

Use this before adding the project to your resume.

Secure Infrastructure

Ready-to-Publish Checklist

- ✓ PDF portfolio completed
- ✓ GitHub repository name selected
- ✓ README summary written
- ✓ Sample data included
- ✓ Graphs or screenshots included
- ✓ Resume bullets ready
- ✓ No real employer/customer data exposed
- ✓ Certificate clearly connected to project
